# micro decor

## Create atmospheric rooms with rustic surfaces

mira's micro decor is a colored plaster made of microcement, which brings new life to boring smooth walls and an attractive raw look to your floors. Old tiling on the floor and walls, can easily be refreshed with micro decor, which can be used directly on cement-based, painted or tiled walls and floors in the living room, kitchen, utility room and in wet rooms outside the shower. Design your own surface and create your very own expression. Do you want the New Yorker Look with raw concrete in gray colors or a warm colored wall that breaks the white surfaces? Or perhaps you want to experiment with the nuances by creating a white base and a colored surface in which holes are sanded, or you want a completely rough or smooth sanded surface.

Plenty of possibilities and expressions - only the imagination sets the limits

# 6820 micro decor

## rustic colored wall plaster

6820 micro decor is a through-coloured wall plaster that provides an attractive rustic look. It can be used on walls in both the living room, hallway, rooms, kitchen, utility room and in bathrooms outside the shower area. 6820 micro decor withstands water splashing, but not direct water on the surface which occurs in showers.

6820 micro decor is a ready-to-use and coloured wall plaster that is mixed with water and applied to substrate with steel or plastic trowel in one or more layers. The wall plaster can be applied directly to all types of solid substrates such as light-weight concrete, masonry, cement-based and plastered walls, when primed with 4170 decor primer, additionally it can be used on painted or tiled walls.

### Available in several ready-mixed standard colors

The color card is for guidance only - Digital color cards and printed matter cannot reproduce color and structure 100% correct

# 6940 micro decor floor

## rustic colored floor plaster

6940 micro decor floor is a through-coloured spreadable microcement for floor surfaces, that gives your floors an attractive play of colors and a raw concrete look. It can be used on floors in both the living room, hallway, rooms, kitchen, utility room and in bathrooms outside the shower area. 6940 micro decor floor withstands water splashing, but not direct water on the surface which occurs in showers.

6940 micro decor floor is a ready-to-use and coloured floor plaster that is mixed with water and applied to substrate with a wide steel or plastic trowel in one or more layers, or with the tooth side of a 4 mm. notched trowel to achieve uniform layer thickness. The floor plaster can be applied directly to all types of solid surfaces such as hardened concrete, levelling concrete and lightweight concrete, when primed with 4170 decor primer, as well as on tiled floors.

### Available in several ready-mixed standard colors

The color card is for guidance only - Digital color cards and printed matter cannot reproduce color and structure 100% correct

# Application

## Pretreatment

Surface must be dry, sound, free from dust, grease, soap and loose particles. Absorbent substrates must be primed with 4170 decor primer. Dense surfaces may need cleaning with 7110 base cleaner.

## Preparation

6820 micro decor is mixed with water with a slow speed mixing drill for 2-3 min. Leave mixture for 2-3 min. before mixing again. Apply with a wide trowel in layer of 2 mm thickness.

## Useful information

As wall plaster strokes can contribute to variegated surface, equally uniform strokes must be avoided. Apply in short semicircular strokes.

## Repetition

If a smooth and even surface is desired, another thinly scraped layer is applied when the first layer is dry, however, no earlier than 3 hours.

## Post-treatment

When the wall plaster is hardened, a fine sandpaper or eccentric grinder can be used in order to make a completely smooth surface.

## Other surfaces

micro decor can also be applied to painted and tiled surfaces, after they have been cleaned and degreased with 7110 base cleaner or 7120 ceramic cleaner. On tiles apply an initial layer of micro decor so joints do not become visible.

## Finish

Applying of 4730 protect varnish or 4720 decor topcoating on wall can be carried out after a drying time of 6-12 hours. Use a smooth paint roller (to avoid dripping that may become visible when work is finished, apply from floor to ceiling on walls).

## Useful information

Roll in different directions to avoid tracks. During application the surface gets a wet appearance that disappears within 1-3 days.

## Cleaning

The topcoat makes surface easy to clean. It can be cleaned with a cloth moistened with water or mild detergents.

# Pretreatment of the substrate

## Absorbent substrates must be primed first

4170 decor primer is a primer without colour, which is used to ensure adhesion, bonding and pore closure on absorbent and rough substrates. The primer must also be used between possibly several layers of mira 6820 micro decor and 6940 micro decor floor plaster.

# Finishing of the substrate

## Avoid stains on finished wall

4720 decor topcoating can successfully be used on walls with 6820 micro decor, for impregnating the plaster surface, when it has fully hardened, after at least 6-12 hours. 4720 decor topcoating gives you a matt and neutral surface protection, that rejects splashes from liquids. However, liquid should be immediately wiped off in order to prevent it from drying into the surface. 4730 protect can be used where 4720 decor topcoating is not sufficient, for example on walls in humid areas.

## Avoid dirt on the finished floor

To protect floor surfaces that have been treated with 6940 micro decor floor, always use 4730 protect, which is a transparent and matt 2-component polyurethane varnish that preserves the surface's raw appearance.

# Tips & Tricks

for exciting results

## New Yorker Look

Many like the raw and modern concrete look that is often seen in New York interiors. If it is to be completely authentic, you can make both the wall and floor with micro decor and add some pipes of iron and shelves of steel.

## More nuances

You can play with more colors and get even more structure on the wall. Make e.g. a dark background with 6820 micro decor and let it dry. Then give the wall a light color, also let it dry. Finally, sand on the wall so that you break the light color and the dark comes into view.

## Rough or smooth

6820 micro decor is beautiful on the wall, both when it is completely rustic or rough and untreated, but you can also create a completely smooth and almost marble-like wall, by polishing it well with fine sandpaper, possibly with an eccentric sander.
